Zynergy

BIOSTIMULANT & QUALITY IMPROVEMENT

IMPROVES NUTRIENT UPTAKE

BOOSTS STRESS TOLERANCE

WORKS SYNERGISTICALLY

INCREASES CROP YIELD

A unique copper & zinc formulation for plant health & defence

Zynergy works in combination with plant protection products to boost fungicidal and bactericidal activity, while supplying crops with key nutrients.

FORTIFLO

Zynergy

Zynergy is a specially formulated combination of highly available copper and zinc designed to boost crop health and maximise yield potential.

This novel nutrient formulation of copper and zinc complexed using OMEX EBA™ (Enhanced Bio-Availability) technology provides rapidly available copper (Cu) and zinc (Zn) through cost-effective low dose foliar applications.

As a plant-health promoter, Zynergy can be a key part of integrated crop management programmes, working synergistically with the fungicidal and bactericidal activity of plant protection products.

Adding Zynergy to conventional fungicide programmes leads to superior blight control than is achieved with fungicides alone, and also secures a higher marketable yield and return on investment. In fact, nutrient uptake is proven to be four to six times more efficient with a Zynergy formulation, compared to standard sulphate applications of Zn and Cu.

Zynergy is suitable for a wide range of crop types and compatible with most insecticides, fungicides and foliar nutrients.

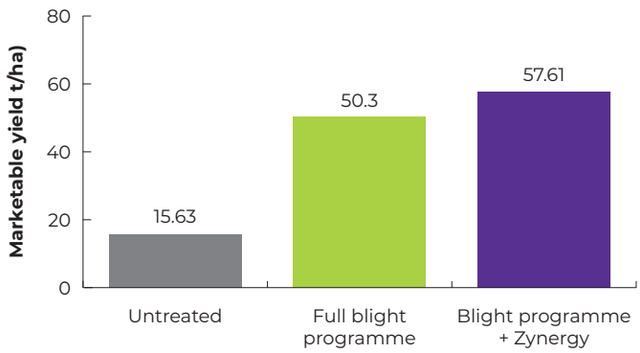
PRODUCT ANALYSIS

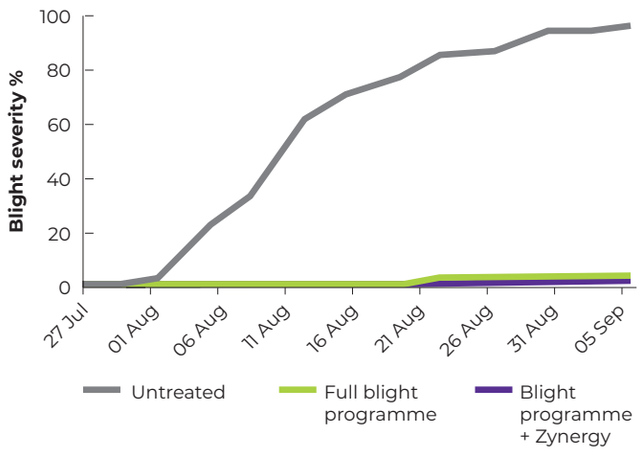
Analysis	w/w	w/v
Copper (Cu)	2.0%	2.5%
Zinc (Zn)	3.5%	4.5%
Sulphur (SO_3)	7.5%	9.0%

POTATO BLIGHT TRIAL RESULTS

Zynergy has been successfully trialled and applied to a wide range of crops, and is proven to offer significant plant health and development benefits when used to aid production of cereals, potatoes, vegetables, fruit and ornamental crops.

Here are the results for a potato blight trial:





Eurofins, UK, Independent trials, 2016/2017.

FORTIFLO liquid foliar fertilisers nourish the nation's crops with the right nutrients at the right time, helping them to reach their full yield potential.
