

Agrochemical Physical Compatibility Guide

These tank mixes have been tested for physical compatibility at recommended rates of use and will mix with each other. No tests have been undertaken on crop safety, product performance or sprayer tank compatibility, therefore use is at the grower's own risk. When using tank mixes always follow the statutory conditions of all tank mix partners. Use plant protection products safely. Always read the label and product information before use. The tables contain sections on agrochemical active ingredients that have been tested, the OME X range of products and tank mixes known to be incompatible; please pay particular attention to this final section.

Tank Mix Guidelines

Ensure sprayer tank is clean and free from residue of any previous products • Half fill the sprayer before adding products. • Allow time for one product to fully disperse before adding the next. • Spray the mixture straight away and avoid leaving in the sprayer overnight. • Check the inside of the sprayer tank for any residue after emptying each tank. • The source and quality of water can have an impact on the physical compatibility of different chemicals • If in doubt conduct a bucket test prior to filling the sprayer.

For further information on OME X products and compatibilities, refer to www.omex.co.uk or

contact OME X Agriculture Ltd on **01553 760011**.

Suspension Fertilisers

Physically Compatible	
Back-to-back Recommendations	Third party products (active ingredients)
ac 650	chloridazon
afalon	chloridazon + metamitron
associate	clomazone
avadex excel 15g	dimethenamid-p + metazachlor + quinmerac
butisan s	ethofumesate + metamitron
clayton buzz	sulphur
clayton metazachlor 50 sc	cyazofamid
datura	cymoxanil
devrinol	cymoxanil + fluazinam
ea metazachlor	cymoxanil + mancozeb
